

HOTEI ENERGY (HE)

Cryptocurrencies in energy services.

November 11th, 2020.

Version 1.0

Abstract

Hotei Energy (“HE”), is the first offshore & outsourcing energy services company, their operating and investment capital is created from the global crypto market, thanks to the participation of small and big investors in the digital market, which they looking for create periodic earnings from legal and real activities. This company is focused on provide services of excellence and quality for the energy sector, initially focused for the oil & gas sector with a open view to providing solutions and services for the development, sustenance and maintenance of clean and renewable energies around the world, using blockchain technology, artificial intelligence, standards, certificates and international norms to position the brand among the firstable world service companies and thus monitor operations globally in real time. HE offers its users the possibility of enjoying rewards generated by the company, through the purchase of company participation tokens through the acquisition of a private token called (“HE”), from which, they are made the calculations for the payment of dividends from the monthly billing earnings accrued by the company for the services offered around the world. There is a finite number of HE tokens, the volume of investor participation being limited; HE purchase process is done via ETH, BTC and USDT exclusively after passing user data verification (KYC). Participation tokens can be sold after the established periods, once the participant so manifests, thus withdrawing the initial value invested and dividends generated during the notification period.
